History of the Department/Program		
The Information Security Technology Program was established by a decision of the General Assembly of the Higher Education Institution.		
Mission	Vision	
To cultivate productive, inquisitive, self-confident, and ethically conscious individuals who contribute to the development of relevant industries and enrich the socio-cultural life of society, while possessing sufficient technical education, knowledge, and skills. To nurture qualified individuals who adapt to changing conditions and keep pace with technological advancements.	To be a program that is preferred by the business world, possesses an innovative and sustainable education system, is a source of pride for those who are part of it, pioneers developments that broaden the horizons of the local community, and ranks among the top choices for students.	
Program Objective		
Advancing information technologies have transformed the concept of “information security” from a mere need into an absolute necessity. The program is designed to provide not only foundational computer knowledge but also to develop information security solutions for all sectors and to introduce new talents to the IT world who can work as technical support staff in the field of computer systems. It trains software developers and technicians who can specialize in the field with both theoretical and practical skills to meet the ever-increasing need for information security in the IT sector. Furthermore, the program aims to train qualified professionals who can help society adapt to rapidly evolving computer technologies and quickly and accurately generate solutions to problems related to data collection and processing.		
Career Opportunities		
Graduates of this program will easily find employment opportunities at all organizations providing internet and email services, all organizations with multi-user computer systems, all organizations with computer networks, all organizations engaged in e-commerce, all organizations offering distance education, and similar institutions.		
General Information About the Education System		
The program is a two-year associate degree program. It is implemented as a 4-semester curriculum under the 3+1 Education Model (3 semesters of classroom instruction and 1 semester of workplace training). A total of 15 weeks of coursework is conducted each semester. Additionally, there is a mandatory 30-day internship course.		
Conditions for Transferring Between Programs		
Physical and Technical Infrastructure		
- 4 classrooms- 1 conference hall- 1 network lab, 2 computer labs.

Career paths for graduates
Students in the Information Security Technology program will play a key role in addressing the growing demand for information security specialists—both in software and hardware—driven by developments in the IT industry. The program is designed to provide students with foundational computer knowledge and to introduce new talent to the IT sector capable of developing information security solutions for all industries and working as technical support staff in the field of computer systems. In line with these objectives, graduates will be employed primarily by industrial organizations, as well as software companies, banks, insurance companies, commercial entities, Internet service providers, hosting companies, and IT consulting firms, companies designing and producing software and hardware products for information security, Internet Publishing Companies, Radio and Television Companies, Research Companies, Stock Exchanges, Transportation and Logistics Firms, and all public institutions and organizations in the service sector.

After graduating from the Information Security Technology Program, our students can transfer to the following departments at the faculties if they pass the Vertical Transfer Exam administered by ÖSYM:

- Computer Engineering
- Software Engineering
- Computer Science
- Computer Technology and Information Systems
- Computer and Instructional Technology Education
- Computer and Software Engineering
- Computer Science and Informatics
- Information Systems Engineering
- Information Systems and Technologies
- Industrial Engineering
- Physics
- Physics Engineering
- Statistics
- Statistics and Computer Science
- Control and Automation Engineering
- Mathematics and Computer Science
- Mathematics and Computer Science
- Meteorology Engineering
- Aerospace Engineering

They can complete a 4-year bachelor's degree in these departments.

WORKPLACE TRAINING

• Starting in the 2019–2020 academic year, our department has implemented the WORKPLACE TRAINING model across all programs it offers, adapting curricula to current conditions with the aim of providing qualified workforce to both the public and private sectors.

• The primary objective of the WORKPLACE TRAINING model is to jointly train personnel and staff who meet the needs of the business world, equipping them with the latest technologies and knowledge.

• Under this model, the three-semester education program in our department consists of three semesters of formal classroom instruction and one semester of full-time practical training at businesses.

• The purpose of the workplace training program is to ensure that, given its extended duration (one semester—16 weeks), the workplace can better get to know the student, assign responsibilities, and facilitate easier access to employment opportunities for the student upon graduation.
